## PVCU

**M**odern uPVC windows have come a long way since they were first introduced in the 1970s and are capable of exceptional levels of performance and aesthetics. Below are some of the key features and benefits:

### **Low maintenance**

Unlike timber which requires regular painting and sanding, PVCU windows are easy to maintain and simply require an occasional clean.

### **Energy efficient**

Our modern PVCU profiles contain mini thermal breaks – known as 'chambers' – which help trap heat in the building and block cold air from the outside. This keeps your home warm and means you can turn down your central heating.

### **Long lifespan**

Modern PVCU windows have been engineered to perform at their peak for decades.

### **Wide colour choice**

All our PVCU window and door frames are available in a wide choice of woodgrain foils, making them look just like timber. They can also be sprayed in any RAL colour, giving you unlimited colour choice.

## ALUMINIUM

---

**A**luminium is a light weight, high strength material that is used in virtually every facet of the modern construction industry from bi-folding doors in homes to curtain walling on the tallest sky scrapers. Below are some of the key features and benefits:

### **Impressive aesthetics**

Thanks to its inherent strength, aluminium frames are slimmer than PVCU. Slim frames mean more glass, and therefore allowing more light to flood into your home.

### **Energy efficient**

All of our aluminium frames have a component called a 'polyamide thermal break', which prevents cold air from entering the home and heat escaping.

### **100% recyclable**

Aluminium is infinitely recyclable making it a very environmentally friendly choice. In-fact, since the first industrial production of aluminium in the 1880s, it is estimated that 75% of all material produced is still in use today.

### **Low maintenance**

Aluminium is highly resistant to corrosion caused by modern industrial pollutants and requires little long term maintenance.

## WINDOWS

A comprehensive range of quality windows that can perfectly suit the configuration of your home.

Our windows can be manufactured and supplied in virtually any style with a vast range of colours and specifications. With the ability to manufacture in-house, you can be assured that our windows are of the highest quality and with the most competitive prices on the market.

### **Low-maintenance, energy efficient PVCU windows**

Windows manufactured by Win-Dor can not only improve your home's aesthetics, but they also have outstanding thermal properties. Our PVCU windows are capable of achieving an 'A' Window Energy Rating when used in combination with high quality glazing units, helping to keep your home well insulated and energy efficient.

*"We're over the moon with our Win-Dor windows! The installers were quick, clean and incredibly professional, and have left us with gorgeously stylish windows that are already the envy of all the neighbours. If you're looking for reliable tradesmen, Win-Dor is the obvious local choice."*

## CASEMENT WINDOWS

Windor offer a wide range of casement styles in either PVCU or aluminium to suit a wide range of properties.

Featuring fixed panes, top opening fanlights and side opening lights, casement windows can be combined to create an almost limitless range of styles whilst providing the benefit of noise reduction, low maintenance, safety and security and energy efficiency.

Alongside the many aesthetic features available, our casement windows accommodate the very latest high performance handles, hinges and locking mechanisms. REHAU frames can be supplied foiled or spray coloured in over 150 RAL shades from our in-house spray coating facilities.

A range of sealed units, both triple and double glazed, are available from our on-site glass production factory.

The authentic features of our vertical sliders means that we can offer a cost effective timber replacement without compromising on aesthetics, while also having the added benefits of low maintenance, energy efficiency and high security.

## SLIDING SASH WINDOWS

If you want to maintain an authentic look to your home, or bring some classic styling to a modern property, the traditional look and charm of sliding sash windows is a perfect option.

Window frames, sealed units and components are all manufactured in-house, giving us complete control over the production process and higher levels of quality for you and your home.

Win-Dor offer high quality PVCU vertical sliders, which have been specifically designed to replicate original timber sash window styles.

*Win-Dor doors can be manufactured in a huge range of styles to suit almost any property offering increased choice to our clients when looking for a stylish new door.*

## DOORS

Whether you're looking for an entrance door, a classic sliding patio door or a bi-fold, Win-Dor can provide you with a top quality product to meet your aesthetic and performance requirements.

All of our doors are fully customisable, and can be made to effortlessly complement our range of windows and conservatories. Choose from either our energy efficient PVCU doors or our modern high performance aluminium doors for a new quality product to improve your home.

## ENTRANCE DOORS

---

**W**in-Dor entrance doors are a simple way to improve the look and style of your home while also improving its energy efficiency and security. If you're looking to replace an ageing front door, or add some extra character to your property, you'll find Win-Dor offer a comprehensive range of styles.

Our entrance doors are available in both open in and open out styles and a huge range of colours. Mix and match from a wide range of modern and traditional door styles, glass designs and hardware to find the perfect combination.

Each door is designed to be thermally efficient and weatherproof to combat draughts and heat loss. These are designed to be highly practical and offer unparalleled levels of functionality and usability, while also incorporating a multi chambered design to ensure good thermal and acoustic insulation.

For security assurances, the doors can be supplied with both conventional locking mechanisms and high security bolt systems for added peace of mind.

## FRENCH DOORS

French doors are a great choice if you wish to connect your home to outside living spaces. Because of their classic styling, French doors are also a good choice if you're looking to fit doors on a traditional property, whilst also getting the benefits of unrestricted access and maximum ventilation.

All of our French doors are available in a wide range of colours including standard White, Clotted Cream, Anthracite Grey and Oak. With extra features such as additional decorative bars and glazing options, you can be sure that Win-Dor French doors can be tailored to your specific requirements.

## COMPOSITE DOORS

If you are looking for the best in security and efficiency, but also want a door that looks great, composite doors are the perfect choice. Compared with traditional timber or PVCu doors, composite doors from Win-Dor can offer comparatively higher levels of security and energy efficiency due to their multi-layered construction.

All composite doors are completely customisable with a vast choice of colours, finishes and glazing options, meaning we can provide you with a door to suit your home perfectly. Popular choices include white, cream, blue, red, green, black, chartwell green and grey.

Our composite doors are constructed with a thermally insulated, high density core which provides excellent sound and heat insulation with a very low risk of expansion or contraction. Their multi-layered construction – an insulated core covered by a GRP skin – also means that your composite will have a durable scratch resistant layer that won't crack or warp with exposure to the elements.

## STABLE DOORS

Win-Dor stable doors stand out in their ability to combine traditional styling with unique functionality. Win-Dor can provide you with PVCU or composite stable doors which are suited to a more traditionally styled home, replicating an authentic farmhouse door's appearance, whilst still maintaining high levels of performance and usability.

With stable doors from Win-Dor, both halves of the door are able to operate independently, which allows you to easily control levels of ventilation and light by choosing which sections you would like to keep open or closed.

To give you peace of mind, our stable doors feature independent locking mechanisms for each door leaf, so you can effectively balance levels of practicality and security.

Like our other windows, doors and conservatories, our stable doors are available in a wide range of colours including white, rosewood, golden oak and woodgrains on white, as well as the 150+ RAL colours available.

## PATIO DOORS

Patio doors from Win-Dor offer great aesthetics, and are an excellent choice of door for homeowners wishing to create a wide opening onto an outdoor space. Adding a patio door to your home can create a brighter living environment and by replacing and upgrading an existing patio door you can benefit from the most up to date energy and security benefits.

We can manufacture and install patio doors which offer some of the slimmest profiles on the market. This means we can offer you better sightlines and a product designed to match our other ranges of windows and doors.

## BI-FOLD DOORS

Bi-folding doors are a great alternative to French and patio doors, opening up your home to a garden, patio or balcony area to bring the outside in and provide natural ventilation. When closed, the vast glass spread lets more light in and gives spectacular views combining your home with the outside.

Win-Dor bi-folding doors are designed to facilitate open-plan living, giving you the ability to create an aperture in your home up to 5 metres wide (6 metres in aluminium).

Depending on the size of your property, you can have up to 7 panes, which can be connected in a number of configurations, giving you great flexibility when choosing how you want your doors to open.

Alongside our PVCu range, Win-Dor can also provide high quality aluminium bi-fold doors, an excellent choice of material for multi-leaf folding door systems.

As well as being available in an almost limitless range of colours and finishes, our aluminium bi-fold doors can be machined to ensure an exact fit. This not only guarantees an easy installation, but also improved weather proofing, draught proofing and general energy efficiency.

## CONSERVATORIES

If you want to add space, value and light to your property, a conservatory is the perfect solution. Win-Dor offer a wide range of stunning conservatory styles, both contemporary and classical to create an additional room for your home. The possibilities are endless, whereby you can easily create space for a new dining area or extra living area.

Our conservatory frames and roofs provide excellent levels of performance and ease of installation. With the option to upgrade to high performance glazing, our conservatories are highly energy efficient, while also having the ability to regulate light and temperature levels.

## STYLES

**W**in-Dor offer a wide range of conservatory styles to suit any type of property.

These include;

### **Victorian**

Characterised by distinctive features such as a steep pitched roof and ornate detailing to suit a more traditional appearance.

### **Edwardian:**

A clean and simple design featuring bold lines to create a timeless look.

### **Gable**

With high sloped roofs, a gable-fronted conservatory is excellent for those looking to add a sense of drama and theatre to a home.

### **P-Shape**

Combining a Lean-To with a Victorian, P-Shape conservatories are perfect for dual purpose living spaces, such as a lounge and family room combination.

### **Lean-To**

Lean-To conservatories are simple in design and can be fitted with roofs with varying pitches to suit any type of house and multiple roof heights. They are very cost effective too, and available in a wide range of colours to suit any property.

## SOLID TILE CONSERVATORIES

Solid roofs are a stylish, eco-friendly alternative to traditional glazed-roof conservatories. Available to enhance four types of conservatory – Victorian, Lean-to, Georgian and Gable – our precision-engineered tiled roofs eliminate glare and condensation, reduce weather noise, cut energy bills and retain heat in winter and stay cool in summer to deliver all-year-round usability. What's more, they're quick to install, minimising inconvenience, and come in a choice of black, brown or terracotta tiles.

\*\* Full building regulations are required for this product. Please ask one of our sales advisors for more information\*\*

*“We were absolutely delighted with our solid roof conservatory – it was surprisingly affordable, so quick and easy to have installed, and we’ve been left with a stylish, comfortable living space we can enjoy all year round, whatever the weather. Now, it feels less an extra room in the house rather than a conservatory, and we use it more than ever before!”*

## BESPOKE

Sometimes conventional conservatory styles and designs just won't do. If this is the case, don't worry: Win-Dor can help. Our team of conservatory experts can design a bespoke conservatory from your exact design specifications, allowing you to build the conservatory best suited to your property.

Bespoke conservatories from Win-Dor allow you to create a completely unique structure that can be customised to the demands of your property and project. With a huge range of colours, finishes and hardware to choose from, bespoke conservatories provide you with greater flexibility when it comes to the design, aesthetic and performance of your structure.

## ORANGERY

Combining the traditional extension with the design benefits of a conservatory, Win-Dor orangeries can offer you the best of both worlds.

Owing to their partially glazed roofs, they create a light and open space, but because of their solid pillar construction they also offer more privacy than a conservatory and remain cosy and inviting all year around.

An orangery from Win-Dor will not just add value to your home, but will also give you a space which exudes stylish, contemporary living.

You can also be sure that our orangeries are not just stylish, but also durable. We can supply you with decorative gutter fascias made from aluminium, which last much longer than PVCu alternatives, whilst our pitched roofs also offer a reliable alternative to leak-prone flat roof systems.

## IN-HOUSE MANUFACTURE

Every window, door or conservatory you order from Win-Dor is manufactured from our state-of-the-art 110,000 square foot factory in Wellingborough. Buying direct from the manufacturer means you can be confident you are getting the best price and that your new products will meet our exacting quality standards.

Every product we produce is meticulously checked by our rigorous quality control department, so you can be sure your new windows will arrive to you in the best shape possible.

The Win-Dor factory has seen major investment over the last few years and contains some the most

advanced manufacturing machinery on the market today, meaning we can achieve an incredibly accurate finish.

## ENERGY EFFICIENCY

---

All of our windows, doors and conservatories are designed to help keep your home well insulated and enable you to reduce your heating bills. Our uPVC windows have multi chambered frames, which form an effective sealed barrier between the outside and your home.

Similarly, our aluminium windows and doors incorporate the latest thermal break technology – meaning that they feature a thermal barrier between the inner and outer layers of aluminium for extremely high levels of efficiency. As for glass, Win-Dor offer a choice of double and triple glazing, including the latest 'low emissivity' glass and can advise you on the best option for your home.

---

*“All Win-Dor products are made with energy efficient materials.”*
